

THE ACROPOLIS MUSEUM

A DIGITAL STORY

SABRINA NAVARRO

THE ACROPOLIS MUSEUM

The Acropolis Museum is an archaeological museum in Athens, Greece located next to the historic site. It holds artifacts/sculptures and other histories from the Acropolis.

THE ACROPOLIS MUSEUM

PAST

PRESENT

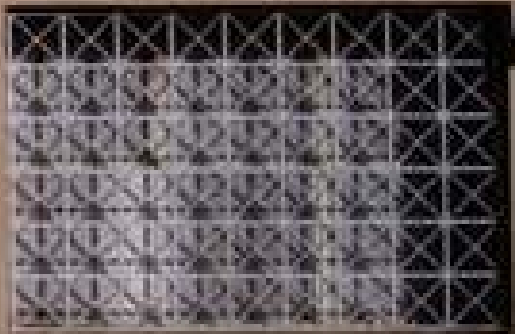

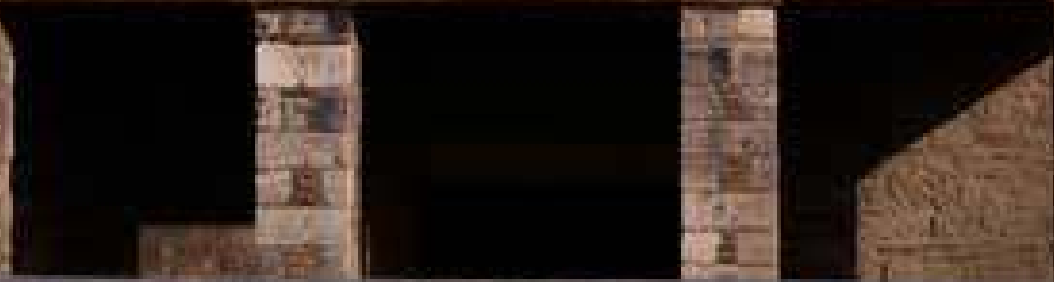

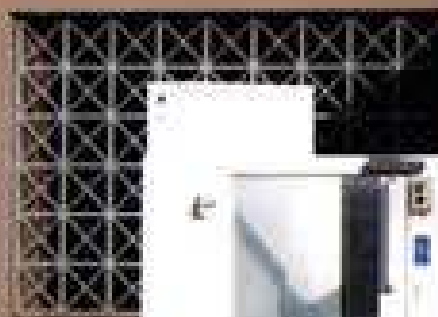

A DIGITAL FUTURE

MOYSEION

THE PAST

The Acropolis Museum underwent many expansions and relocations since it was founded. The museum was founded in 1865, and completed in 1874. A second building was built in 1888 due to the rapidly growing artifact collection. Then around 1945, after WWII, the museum was refurbished, and a new building was built and operated until 2007.

The new Acropolis Museum, built on the south side of the Acropolis, opened on June 20th, 2009. Lots of controversy arose at the site of this new building since it was set to be built on top of an archaeological site. However, the new museum does a beautiful job of showing off this site using glass panels on the floor.

THE CURRENT ACROPOLIS MUSEUM

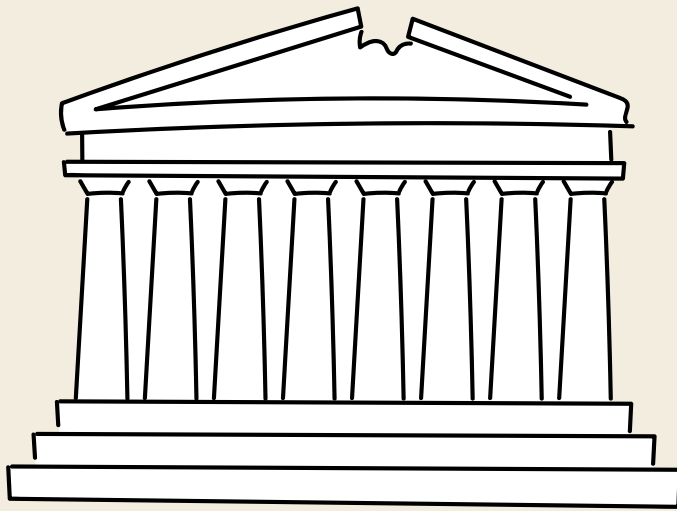

THE CURRENT “DIGITAL MUSEUM”

A couple years after the new museum opened (June 20th, 2009) a new program was created to make a new website that would be accessible globally. This website would utilize new technologies to provide education, entertainment, and other information to their community.

This program digitized all of the artifacts in the museum's collection, along with a 3D scanning. These artifacts are available on their website and have free access to them. The website also includes educational content and other general information about the museum.

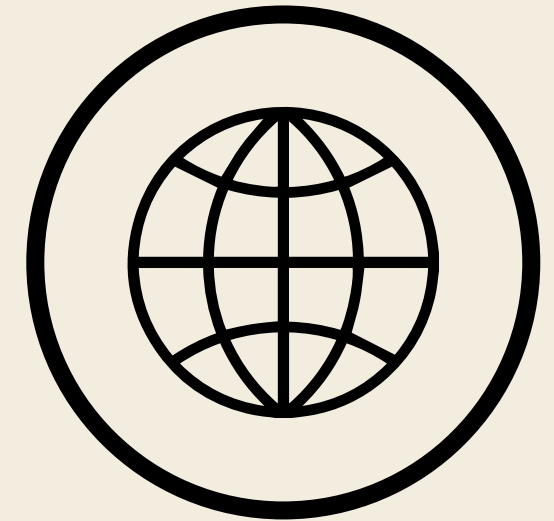

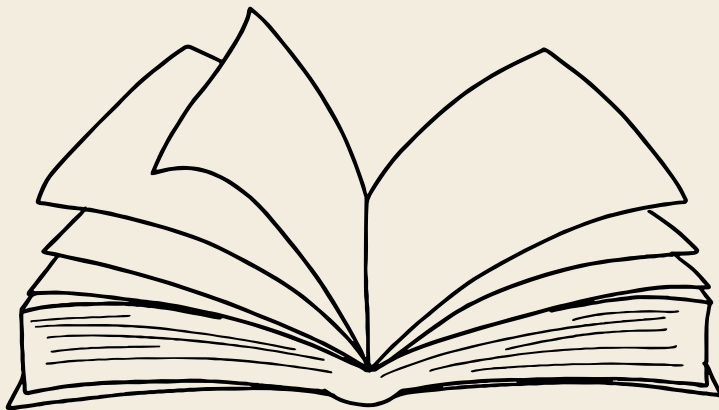

A FUTURE DIGITAL STRATEGY

PRIORITIZING LEARNING

ACCESSIBILITY

VISIBILITY AND SOCIAL MEDIA USAGE

THE FUTURE DIGITAL SPACE

The Acropolis Museum has undergone many upgrades both structurally and within the new digital space. I've created a new digital strategy for the museum to further enhance the Creation of Acropolis Digital Museum program that ended in 2020.

This strategy includes prioritizing the online visitor's learning experience by adding new features to the website including a virtual tour expansion, augmented reality, and a search engine for academic sources. To improve accessibility, I suggest adding more languages to the website and adding new features like text-to-speech and video subtitles for their educational content. I'd also like to add more mobile access by creating an app for the museum to use for both physically present and online visitors. For the final implementation, I would want to enhance online visibility through increased social media usage and prioritize user engagement.
